# Demo 的功能测试

1. 新建 Win32 控制台应用程序

2. 添加 "main.c"

## 3. 参考 SDK

"Windows\_voice\_1.109\_57a07e91\samples\tts\_sample\tts\_sample
.c"语音示例

4. 将 SDK 中 bin,include,libs 文件复制到 Demo 文件夹下

5. 设置附加包含目录

6. 设置工作目录

7. 通过属性设置,将可执行文件 copy 到 bin 目录下运行

## 8. 此时编译运行会报错

## 解决方案:

- ✓ 将 "\_CRT\_SECURE\_NO\_WARNINGS"添加到预处理器定义中
- 修改前

● 修改后

- 9. main.c 文件中加载相对于工程文件的相对路径
  - "Windows\_voice\_1.109\_57a07e91\samples\tts\_sample\tts\_sam ple.c"语音示例的代码,需修改

#### ● 修改后

#### 10.编译运行

## 11.生成的语音文件

### 12.播放生成的语音

## ◆ 完成合成技术 Demo 的功能测试
